

Power Products International Ltd plays a leading role in the distribution of Power Semiconductors and associated electronic components including inductors, RFI filters, heatsinks, fuses, controllers and control boards. Our strategic partnerships with these major electronics companies ensures that PPI Ltd is best placed to meet the requirements and demands of the power semiconductor user. With the emphasis on Quality, Service and Competitive Pricing PPI Ltd is regarded by many industry leaders as the "Supplier of Choice".

Vishay Intertechnology Inc. is one of the world's largest manufacturers of semiconductors. Products stocked and distributed by PPI include all High Power Semiconductors.

As the market leader in the field of diode and thyristor semiconductor modules, SEMIKRON enjoys 37% of the worldwide market. PPI Stock all popular diode, thyristor and IGBT Modules. Our Engineering department provides full technical and applications support.

For more than 30 years, innovation and customer service have kept Diotec at the forefront of semiconductor development they are market leaders in diodes and bridge rectifiers in both SMD and THP packages.

Pada are continuously developing new concepts and the product range now comprises over 1,000 extruded aluminium profiles and more than 20,000 finished products. The combination of advanced manufacturing techniques and materials, confirms PADA Engineering as the market leader in thermal engineering solutions.

Kunze Folien is a leading supplier of customized heat management solutions. Semiconductor cooling is always a decisive factor in the development of power electronics. Kunze Folien face that challenge with innovative materials, processes and techniques.

PREMO Group, is a leading inductive components manufacturer. Products include RFID components, Inductors, EMC filters and PLC Components. Market sectors include automotive, renewable energies and railway applications.

With a reputation for quality and innovation it is not surprising that the Westcode power semiconductor product portfolio is one of the strongest in the business. Precision manufacturing facilities and a total commitment to quality, allow Westcode to deliver unsurpassed service and world-class products.

Spectral is a leading UK manufacturer of thyristor controllers for heater batteries in HVAC systems. The focus on advanced switching techniques and efficient circuit design maintains their prominent position as the Market Leader.

Enerpros' varied product list includes motor starters, battery monitoring and control systems, firing boards, snubber boards, regulator boards and controller packages.

A pioneer in high power semiconductor applications, Powerex offer a broad line of product and support many markets, including transportation, AC & DC servo drives, and motor controls, UPS, alternative energy, medical power supplies, welding, induction heating and electric vehicles.

Cooper Bussmann manufacture North American and European-styled fuses for the electrical, electronics and transportation industries, they offer engineering, training and testing services focused on downtime reduction, workplace safety and Code Compliance.

SIBA GmbH have been manufacturing fuses since 1946. The range comprises medium voltage, industrial, semiconductor protection and miniature fuses to many international standards including IEC, UL and British Standards.

A range of disc varistors to control transient voltage surges in your equipment to safe levels. Peak current surges of up to 6500A (8/20 s) and peak power surges of up to 565J (10/1000 s) respectively can be limited by these fast-acting devices.

Two high-power laboratories –one near Lyon, France and one in Newburyport, MA-USA, play a critical role in electrical protection solutions and development. Ferraz have the capability to test quickly and efficiently to keep pace with your development schedule.

Certificated Supplier No. 016410
ISO 9001 : 2000
